Tantor Audio. No binding. Condition: New. Dimensions: 7.4in. x 5.3in. x 0.6in. Ripples in Spacetime is an engaging account of the international effort to complete Einsteins project, capture his elusive ripples, and launch an era of gravitational-wave astronomy that promises to explain, more vividly than ever before, our universes structure and origin. The quest for gravitational waves involved years of risky research and many personal and professional struggles that threatened to derail one of the worlds largest scientific endeavors. Govert Schilling takes listeners to sites where these stories unfolded-including Japans KAGRA detector, Chiles Atacama Cosmology Telescope, the South Poles BICEP detectors, and the United States LIGO labs. He explains the seeming impossibility of developing technologies sensitive enough to detect waves from two colliding black holes in the very distant universe, and describes the astounding precision of the LIGO detectors. Along the way Schilling clarifies concepts such as general relativity, neutron stars, and the big bang using language that listeners with little scientific background can grasp. This item ships from multiple locations. Your book may arrive from Roseburg,OR, La Vergne,TN. Audio CD.
